

A proactive and solutions-focused Geospatial Specialist with a track record of delivering high-precision spatial analysis and automation for Nationally Significant Infrastructure Projects. Expert in bridging the gap between complex spatial data and statutory project delivery, with advanced proficiency across QGIS, FME, and the ESRI ecosystem. Proven ability to architect automated ETL pipelines and utilise a wide array of Python libraries to increase operational efficiency. A collaborative professional experienced in working alongside multidisciplinary engineering teams to maintain performant systems and rigorous technical standards.

TECHNICAL SKILLS:

- Automation & ETL: FME (Advanced: Workflow automation and data migration), Python (Advanced: GeoPandas, Rasterio, Shapely, NumPy, PyQGIS, and ArcPy).
- GIS Software: QGIS, ArcGIS Pro (Advanced Spatial & 3D Analyst), ArcGIS Enterprise/Online, LandApp, GroundMapper.
- Database & Systems: Spatial database design and management, SQL (PostGIS, SQL Server), C# (.NET for ESRI tools).
- WebGIS & Cloud: ArcGIS Online/Enterprise, Experience Builder, Field Maps, Leaflet, HTML, CSS, JavaScript.
- Analysis & Cartography: High-precision cartographic production for statutory processes, Multi-Criteria Analysis (MCA), LiDAR processing, Topology cleaning and data validation.

PROFESSIONAL EXPERIENCE:**Wood group, GIS Analyst, April 2024 to Present**

- Workflow Automation: Leveraged FME and Python to automate large-scale GIS workflows, utilising libraries such as GeoPandas and Shapely to transform complex raw data into structured spatial layers, significantly reducing manual processing time.
- Infrastructure Delivery: Lead the creation, visualisation, and spatial analysis of complex routing projects, ensuring high-precision data alignment for large-scale utility assets.
- Custom Tooling: Developed automation scripts using PyQGIS and ArcPy to streamline data validation and ensure consistency of spatial outputs across multi-disciplinary project teams.
- Cross-Functional Collaboration: Work closely with internal teams to ensure that GIS systems, geodatabases, and web services are performant, secure, and fit for purpose.
- Statutory Cartography: Produce technically accurate and visually compelling maps and plans to support infrastructure planning.
- System Administration: Administer and manage cloud-hosted WebGIS applications, ensuring that real-time spatial data is accessible to multidisciplinary teams and external clients.
- Standards & Quality: Take joint ownership of the development of GIS technical standards, ensuring that data management practices across onshore and offshore projects are rigorous and reproducible.

University of Aberdeen, MSc Geographic Information Systems, Jan 2023 to Dec 2023

- Spatial Analysis: Conducted complex geospatial analysis of environmental constraints to inform decision-making for railway route selection and wildlife conservation.
- Advanced Modelling: Applied Map Algebra and Fuzzy Analysis to resolve competing commercial and environmental constraints for large-scale land development.
- Remote Sensing: Processed LiDAR and Satellite imagery using Rasterio and other geospatial libraries to create high-accuracy base maps for infrastructure planning.
- WebGIS Development: Built interactive mapping applications using a combination of ArcGIS Online and custom HTML/JS (Leaflet).

Hospitality Sector, Team Leader & Kitchen Worker, 2016 to 2024

Developed essential soft skills in high-pressure environments, including team leadership, rapid problem-solving, and meticulous attention to detail in fast-paced operational settings.

EDUCATION & QUALIFICATIONS

MSc in Geographical Information Systems
(Commendation), 2023

BSc (2.1) Zoology (Specialising in Ecology), 2022

French Baccalaureate, 2016

INTERESTS

Rowing, Hiking, Miniature Modelling.

PROFESSIONAL MEMBERSHIPS & LANGUAGES

Royal Geographical Society: Associate Fellow

Languages: English (Fluent), French (Native)
